responsibility

Aluflexpack novi Group

Aluflexpack novi d.o.o. and associated companies are a group of production companies with the same business orientation, compatible production and their core business activity in production of flexible packaging and conversion of aluminium foil and flexible films. The group is an independent and competitive group successfully supplying to leading global players. The parent company Aluflexpack novi with its head office in Zadar (Croatia) has two production plants located in Zadar and Umag (Croatia) and associated companies consists of the following companies: OMIAL novi with its head office and production plant in Omis (Croatia), TOF with its head office and production plant in Drnis (Croatia) and Aluflexpack novi Polska with its head office in Poznan and production plant in Tychy (Poland).

Aluflexpack novi operates on the international and domestic market, with the aim to play a major role its sector in the area of EU and Eastern Europe, with a support from suppliers and customers which also represent leading companies in their field of business. Aluflexpack

novi is dedicated to quality, flexibility and service in all of its business processes. The Group is continuously developing innovative and environmental oriented packaging solutions and it is aware of its responsibility towards the shareholders, employees and the environment. The personal responsibility and active role of employees in innovative changes are the key factor for Aluflexpack novi's novi success.

quality

Aluflexpack novi aluminium containers and lids

Aluflexpack novi Sternal program offers aluminium containers and lids of different size and thickness for the food industry lacquered or printed.

The laboratories and the Aluflexpack novi group production facilities are equipped with the most sophisticated instruments and machines working in four shifts to ensure 24 hour quality control, divided into material quality control, quality control of intermediate goods, control of processes and quality control of final products.

It is important to note that the aluminium containers and lids of the group are produced from initial raw materials all the way to the final phase, which guarantees fast and high quality delivery.

Aluminium is generally an excellent material for the food industry. It is extremely resistant and protects from external im-

pacts, microorganisms and spoilage, and at the same time it is nontoxic and sterile. With foodstuffs it is very important that it does not impact the change to composition of ingredients and it does not change the taste of the product, so it can be safely used for food preservation over longer periods of time. Thanks to its light weight and flexibility it is appropriate for the design of the most challenging shapes, and its great advantage is also the possibility of recycling and compliance with environmental standards.
